

Pulse from HSL is a **simple high-quality videoconferencing** service designed from the ground up for collaboration by healthcare professionals

Pulse from HSL is a simple high-quality videoconferencing service designed from the ground up for collaboration by healthcare professionals. With the complete solution from HSL, you can discuss patient care in a more effective and efficient way. In fact, virtual meetings have been shown to improve quality of care, enhance shared decision making, minimise risk of infection and reduce costs for hospitals and healthcare organisations. Pexip Health in collaboration with Pulse MDT lets clinicians easily join video meetings from the device of their choice, without the need to download any software or plugins. Providers can also join using existing video conferencing systems or MS Teams.

No new workflows to learn.

Joining as a remote participant will provide a high quality seamless video experience in the right environment to formulate ongoing care plans for patients. With the Pulse MDT Video Conferencing Service from HSL you will have top image quality of 1080p for effective informed decision making.

Join MDT's using any device including mobile, desktop app, or web browser.

No downloads or plugins required - simply click to join, easy.

Connect from anywhere, at any time, eliminating the need for travel.

Schedule meetings quickly with the tools you already use.

Fully customizable with one touch join

Sharing content in high resolution at **1080p** with **30 frames per second.**

Why choose HSL and Pulse?

HSL have more than 25 years experience in providing the best Telehealth experience in healthcare organisations.

Our service operations centre with our friendly team of experts is available to concierge and offer immediate support by phone as needed.

Our team have the knowledge and creativity to produce a seamless, collaborative solution, tailored to fit the needs of your trust.

Pulse MDT with Confidence guarantees all remote staff, whether on dual display room system or by browser, to see the patient record and either the PACS or Pathology displayed in the presenting MDT room. This will make a huge difference to MDT Meetings for remote staff who can now reference the patient info/history at any moment and review updated notes in realtime so that comments can be made confidently, and the patient gets the best outcome.

Client Testimonial

Hampshire Hospitals orthopaedic team has rolled out an innovative solution to enable better collaboration amongst Multi-Disciplinary Teams (MDTs) located across multiple hospital sites and in turn increasing the spectrum of input from healthcare professionals on cases coming through the Hospital's orthopaedic department. The solution has aided the hospitals in reducing travel and increasing collaboration amongst regional MDTs currently working across multiple sites.

Commenting on the collaboration with HSL to deliver MDT Pulse David Howard, Lead Orthopaedic Surgical Practitioner and Orthopaedic MDT Lead at Hampshire Hospitals said...

”

“From the second I got involved in the project, access to HSL's team was simple and no request was ever a problem. HSL's in-depth knowledge of our work and understanding of our needs as well as their calmness when reacting to challenges and fielding technical queries made them ideal partners for implementing the solution.”
